Builder who takes an idea to a working product fast, using AI. Currently building Eñe, a Spanish tutor for Korean learners with a fine-tuned language model, and AJFit, a coaching app for a fitness coach and their clients. Before that, 1.4 years of production backend work in Java, Oracle PL/SQL and SQL for a core banking platform.

SKILLS

AI & LLM apps: Ollama, Gemma fine-tuning (SFT, GRPO), evaluation on held-out test sets, prompt design, AI coding agents (Claude Code)
Languages: TypeScript, JavaScript, Python, Java, SQL (Oracle PL/SQL, PostgreSQL)
Product & Frontend: React, React Native, Vite, Tailwind, mobile-first web apps, Web Speech API
Backend & APIs: Node.js, Express, Hono, REST & SOAP APIs, WebSocket, Drizzle ORM
Cloud & Data: Cloudflare Workers (D1, KV), GCP (Cloud Run, Cloud SQL, IAM), AWS, Docker, CI/CD, PostgreSQL, SQLite, Supabase
Quality: JUnit, PyTest, unit & integration tests, code reviews, security audits
Spoken languages: Spanish (native), English (C2)

PROJECTS

Eñe (ene-demo.fprunell10.workers.dev) – co-founded Spanish tutor for Korean learners. Invite-only mobile demo lesson with a mascot guide, speech input and an AI tutor that corrects the learner's Spanish and explains in Korean. Research track: a 2B tutor model fine-tuned from Gemma 4 E2B on one laptop GPU scores 177/208 on a frozen held-out test set versus 123/208 for the stock model (github.com/Riloox/gemma-spanish-tutor-for-korean). (Cloudflare Workers, KV, Ollama, Python, Web Speech API)

AJFit – mobile-first coaching app built for a fitness coach and their clients under a revenue-share agreement: workout logging, weekly volume and progress charts, session feedback by message, audio or video, meal planning from ingredients at home, and a coach view that ranks what needs attention. (React, TypeScript, Hono, Cloudflare Workers, D1)

Hostkind – open-source, self-hosted control plane for game servers and long-running processes: process supervision, live WebSocket consoles, backups, schedules, users, roles and an audit trail in a single Node.js process, with no cloud account required. (Node.js 22, React, Express, WebSocket, SQLite, Electron; AGPL-3.0)

Cleta – bike-sharing platform for the UTEC Fray Bentos campus: mobile app, web admin panel and a backend integrating Allegion smart locks over BLE. (React Native, TypeScript, Node.js, PostgreSQL, GCP, Docker)

Falta Uno (faltauno.onrender.com) – football pickup-match organizer built solo, with an ELO rating engine, team balancing and unit + integration tests. (React 19, TypeScript, Express, Drizzle ORM, Supabase)

EXPERIENCE

Bantotal – Software Development Analyst — Apr 2025 – Aug 2026
Montevideo, Uruguay · Hybrid

- Built and maintained backend services across core banking modules in a multi-language stack (Java, Oracle PL/SQL, GeneXus) for a platform used by 60+ financial institutions across Latin America.
- Resolved 50+ issues through incident triage and root-cause analysis, improving reliability and logging across SOAP/REST integrations.
- Selected by supervisors for the company's newest project in under one year in the role.

EDUCATION

UTEC – Universidad Tecnológica del Uruguay · Licenciatura (B.Sc.) in Information Technology — Mar 2021 – Dec 2025
Karelia University of Applied Sciences · Exchange Student, Information Technology — Aug 2023 – Jan 2024

CERTIFICATIONS

AWS Academy Cloud Foundations (Oct 2024) · Google Cloud Computing Foundations (Oct 2024) · Google Cloud Cybersecurity · Kaggle: Machine Learning · Python Essentials 1, Cisco (May 2023) · Liderazgo en la Era Digital, edX (Oct 2024)
